

Nanostring nCounter™ Custom CodeSet Price List

Custom CodeSets are created with the client's input. The number of assays is set but the number of genes is flexible (between 20 to ~800 genes). The number of genes should include at least 5 genes which show a steady state of expression under the experimental conditions. Probes can be designed around a particular sequence within your gene of interest. Prices for the number of genes shown are for estimates only.

Prices shown include the CodeSet, probe design, all consumables and service costs.
